APPLICATION NUMBER : 10093569

APPLICANT : TOYOTA MOTOR CORP;

INVENTOR : UMEDA YUKIHIKO;

INT.CL. : G01R 19/00 H03F 1/30

TITLE : CURRENT DETECTOR

ABSTRACT : PROBLEM TO BE SOLVED: To obtain a current detector in which a highly accurate current detection can be obtained through a simple arrangement even if a temperature fluctuation occurs in a differential amplifier circuit by removing the detection error resulting from a temperature fluctuation in the differential amplifier circuit.

SOLUTION: Upon receiving a difference voltage value VDF indicative of the voltage difference across a shunt resistor 7 from an A/D conversion circuit 15, an ECU 17 corrects a detection error resulting from the temperature fluctuation of a differential amplifier circuit ASIC 13 contained in the inputted difference voltage value VDF using correcting information concerning to the combination of a plurality of reference voltage values VREF, VOFF, stored in a reference voltage memory section 23 while being updated among correcting information associated with a plurality of combination variables of reference voltage value.
